YOUR TRACTOR FRAME CALCULATIONS FOR SLEEPER MOUNTING

Back of Cab (BOC) to Back of Sleeper (BOS):

ENTER! - Sleeper Length
ENTER! - Boot Area (3" for Pete, KW & Freightliner) (5.75" For Volvo) (9" for Western Star)
 BOC to BOS =

BETWEEN RAILS: Leave area clear between frame rails from **-10** to **4** BOC
 This area needs to be free of any cross members, carrier bearings on any other structural pieces in order to properly install the sleeper air ride or rubber cushion ride mount system.

OUTSIDE OF RAILS: **Tool Box (Std 40") Plus Clearance LH Side & RH Side** **40"**
Gen Box (Std 40") Plus Clearance LH Side & RH Side **40"**
Tool Box (Std 52") Plus Clearance LH Side & RH Side **52"**
Gen Box (Std 52") Plus Clearance LH Side & RH Side **52"**
Frame Mount Step **12.5"** to **18.5"**
 Leave outside of frame rail clear from **-10** to **4** BOC
 Air bags 4 & 5 and the outboard mount rubber system fit on the outside of the frame rail. These may placed between a fuel tank and the frame, but tank brackets, boxes or any other item mounted in this area would prevent bags 4 & 5 or the outboard rubber mounts to be installed.

FRONT MOUNT: Leave outside of frame rail clear from **0** to **10** BOC

OTHER SUGGESTIONS:
 Place Air & Electric/Pogo Stick at (Approx 12" BOS) **12** BOC
 Place Rear Of Fuel Tanks At (Approx 3" BOS) **3** BOC

BOS = Back Of Sleeper BOC = Back Of Cab
